

BRING NEW LIFE TO BUSINESS COMMUNICATION

What to know about business communication

The way companies communicate business documents such as invoices, account statements, order confirmations and other documents, with their customers, suppliers, authorities and partners is vital in many ways. Not only can companies build and strengthen corporate identity by making the right choices, they can also receive and deliver business documents in the preferred choice of format for their external stakeholders - provided that they have the right tools at hand.

Changing formats, media and ERP systems will not be a problem either, if your company invests in a solution that meets these challenges.

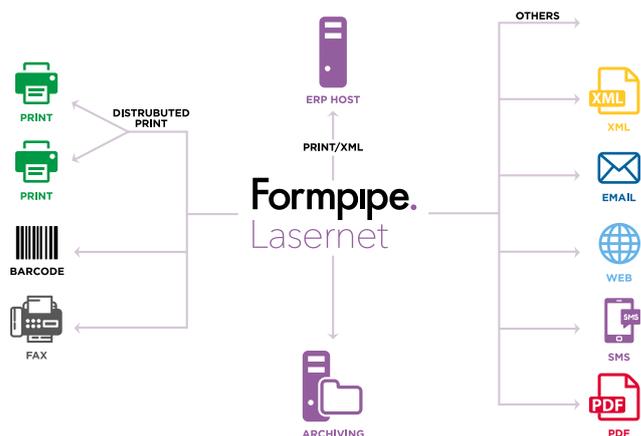

With Lasernetet Input and Output Management companies can streamline the stream of incoming and outgoing business documents, and save on resources as well.

As a market leading Input and Output Management solution, Lasetnet is designed to fit the customers' needs. Simply tailor a solution that fits the organization and the needs of the customers based on our module-based software.

Any format and output with Lasetnet

A regular, "raw" print can be (mass) printed in any format and via any media with Lasetnet. Thus, an invoice can automatically be sent as print, fax, e-mail or XML.

Customer A can receive statements of account via email, while customer B receives the statements via fax or print. The delivery media is chosen from information within the document itself. At the same time, Lasetnet can archive a copy of the distributed document in a locked PDF format which is a legal storage format for invoices.

Distribution

With Lasetnet, the development of business documents is auto-mated. Produce documents when they are needed - without manual intervention or unnecessary time consumption. For example, an invoice printout in an accounting department automatically produces a barcode label and sends a shipment confirmation e-mail to the customer. Such documents can also supply additional information concerning new product offers, sales and marketing campaigns. In most companies, "people time" is used on the distribution tasks associated with document production and delivery. The automation of these tasks will allow company resources more time for more valuable activities.

Easy maintenance

A Lasernet solution can be maintained by each individual business unit – without advanced computer skills or special qualifications.

The design overlay and address information etc. can be constructed in MS word. More advanced maintenance and the addition of logic naturally requires some programming skills. Easily manage the output of business documents with the tools that is familiar to your organization.

Lasernet - the safe choice

With more than 2,000 installations, Lasernet is one of the most widely adopted and highperformance tools in Europe for print, Input and Output Management and business communication.

Lasernet was first introduced in 1995, and has since then undergone extensive modernization and adjustment to fit the needs of the customers.

Lasernet covers needs related to design, conversion and distribution of business documents and printing of forms in small company as well as Enterprise Output Management at high speed and complexity in large international groups.

Start considering the business scope

Many factors need to be taken into consideration when determining how much an organization can gain by implementing a state-of-the-art input and output management solution.

It is of paramount importance to determine which input/output formats that are requested by the external stakeholders, what the legal requirements with regards to formatting/electronic archiving are, what ERP upgrades or changes may be ahead for the organization etc. In addition, building a solid business case and uncovering how much the organization can save on streamlining incoming and outgoing communication of business documents is also central to any Lasetnet project.

Formpipe assists companies in this process, and points them in the direction of a Lasetnet partner that can implement and support their solution from day one.=

Type of document maintenance

DESIGN MAINTENANCE

Layout, address information, font size, font type, barcodes, Logo adding message, page margins, marketing text.

ADDING NEW FORMS OR FUNCTIONS

Adjusting logs, output, media, formats, creating new forms variations.

ADVANCED LOGIC OR PROGRAMMING

Programming of functions for calculations and logic. Advanced data conversion.
