

**By means of FormPipe Platina Process Server, processes can be visualised, automated and analysed in an integrated manner that had not previously been possible.**

The powerful and user-friendly drawing tool makes it simple to create professional process views that can then be used to automate activities at different levels. FormPipe Platina Process Server also provides support for valuable process analysis with the opportunity of providing information in real-time about the relevant process on the basis of aspects such as efficiency, practicality and flexibility.

### Full control of the process

With FormPipe Platina Process Server the user is given the means of directly following specific processes in a modern graphical web interface that quickly provides clear presentation of active process stages in a process.

FormPipe Platina Process Server is a unique xml-based process motor with a user-friendly interface and functionality that makes it possible to handle both internal objects in FormPipe Platina as well as external objects or processes in outside world systems.

### Quality and overview

Process charting is an important part of a living quality work that is facilitated by the intuitive drawing tool that is provided in FormPipe Platina. Process charts are created in a process library that supports sub-processes and version handling, which simplifies and prepares the ground for increased understanding, commitment and organizational development.

FormPipe Platina Process Server is a server component that is fully integrated with, and - in a discernible manner - increases the use of, other parts that are activated in Platina such as document and case handling.

The HTML-based 3-dimensional process chart presents the process status in real-time and enables users to follow processes in all stages in a totally new way. With FormPipe Platina Process Server, all forms of quality audits are facilitated while, at the same time, different forms of process analyses provide valuable support for improvement work. With the powerful collection of pre-defined and configurable functions, there can be automation of parts of processes or, in certain cases, even entire processes.

### About FormPipe Software AB

The products of FormPipe Software assist organisations to capture, manage, and place information on a contextual basis.

Lower costs, minimal risk exposure, and structured information are the benefits of using FormPipe's ECM products
