

Formpipe Software and Capgemini have been chosen to deliver digital transformation for the Danish Agricultural Agency

As a result of their first strategic collaboration, Formpipe Software and [Capgemini](#) in Denmark have won the tender for delivering application development and maintenance, system operation, and support of the entire 'CAP-TAS' platform¹ of the Danish Agricultural Agency. The contract value constitutes DKK 200-250 million. Used for managing EU's agricultural funding, the 'CAP-TAS' platform is a crucial tool for Danish agriculture.

Based on their deep insight into the Danish Agricultural Agency's business and system landscape, Formpipe Software and Capgemini will collaborate to deliver a team of experts to the Danish Agricultural Agency. Together, the two organizations offer market leading knowledge of the European agricultural industry and food sector with strong local domain insight.

"For the Danish Agriculture Agency, it has been important to gather all application development, system operation, and application maintenance of CAP-TAS in one agreement. I believe that with the new agreement, we have a very good starting point to offer our users of CAP-TAS a better user experience going forward. Now we are looking forward to getting started," says Jon Emil Simonsen, Vice President of Danish Agriculture Agency.

The contract will be in force for the next four years, with the possibility of one year's extension up to three times. The current supplier will hand over the assignment to Formpipe and Capgemini during the winter of 2022/23.

"We are very pleased and proud to have won the contract, and we look forward to a close and strong collaboration with Capgemini, which possesses deep skills and considerable knowledge of the entire application layer in terms of system operation, support, and application maintenance. It is a tremendous complement to Formpipe that we are allowed to continue the work that we have delivered to the Danish Agricultural Agency in the past years – and it motivates us to deliver even greater work," says Thomas à Porta, CEO of Formpipe Denmark.

Many years of collaboration with the Danish Agricultural Agency has provided Formpipe with deep domain knowledge of the CAP-TAS platform, which the software firm has been developing for the past 15 years. The new agreement will expand the collaboration, with the addition of Capgemini's expertise in the agriculture sector.

Claus Rydkjær, MD of Capgemini in Denmark said, *"Formpipe and Capgemini both have extensive expertise and experience with application development, system operation, and maintenance of solutions for public organizations. We look forward to bringing our deep experience in the international agricultural sector, our proven delivery expertise, and an attractive scaling model for operation and maintenance of critical public applications to improve the digital process for CAP-TAS users and deliver value for the Danish Agricultural Agency".*

The CAP-TAS platform facilitates the allocation of EU subsidies to Danish farmers by means of an automated and digital process; This is a relatively complex and cumbersome process based on complicated rules. The

automation of the process has brought about a wide range of advantages – for example, reduced case processing time, minimised level of failure rates, and optimisation of the agricultural industry's user experience.

About Formpipe Software

Formpipe Software A/S supplies premium business software to medium-sized and large enterprises as well as public organisations. We deliver to those who want to excel in the digital world. Formpipe is a value-driven software company – we put people first and at the centre of the digital transformation. Our mission is to build valuable relationships between data and people. We are passionate about creating value for our customers, and we contribute to an inclusive, trusting and sustainable digital society.

Since 2010, Formpipe Software A/S has carried out maintenance and development of the CAP-TAS platform for the Danish Agricultural Agency and through this work obtained unique insight into the application, the surrounding systems of the Danish Agricultural Agency's infrastructure and how to ensure effective cooperation with the Danish Agricultural Agency.
