

Two components, one powerful software.

Formpipe's Lasernet connector for Dynamics 365 Business Central provides companies and organisations with an effective tool for creating reports and designing business documents in a way that reflects positively on their company brand.

Create and redesign business documents in a fast and easy manner with Lasetnet Connector for Business Central. Change logos, incorporate marketing messages and update the general look and feel of your business documents so that they send a strong message about your business vision to the market. Use your documents to communicate your brand with Lasetnet Connector for Business Central and check out how our customers use Lasetnet to brand their organisations in many different countries and industries.

Create and redesign business documents in a fast and easy manner.

Key Benefits

Preview function

A preview-function that makes it possible to view the documents before updating and sending them.

Distribution

The ability to employ many different output channels (paper, e-mail, fax, XML, UBL, PDF, etc.) – handling of document distribution through Business Central to ensure that customer A can receive a fax while customer B gets a PDF file attached to an e-mail at the click of one button.

Instant archive & view

Archive for printed documents that can be opened and read directly from Business Central.

Built into Business Central

Business logic stays in Business Central, making upgrades easy.

Format and Footer

Control your footer or bank information based on currency or language. With Lasetnet Connector for Business Central you can also create your own date and number formats to meet your business requirements.
